

a pair of parallel, spaced-apart frame rails confining the flooring members therebetween in closely spaced adjacent relation to form a floor surface; and

a pair of end members extending transversely between the frame rails at the ends thereof to secure the [frame] flooring members against movement parallel to the frame rails, at least one of the end members being selectively moveable relative to the frame rails to permit selective removal of one or more of the flooring members from between the frame rails.

- 2) A “clean” copy of claim 1 as amended appears on the following page:

~~8.1~~ 1. An improved flooring system for a cargo-carrying vehicle, the system comprising:

a plurality of flooring members;

a pair of parallel, spaced-apart frame rails confining the flooring members

therebetween in closely spaced adjacent relation to form a floor surface; and

B1 a pair of end members extending transversely between the frame rails at the ends

thereof to secure the flooring members against movement parallel to the frame rails, at

least one of the end members being selectively moveable relative to the frame rails to

permit selective removal of one or more of the flooring members from between the frame

rails.
